Labyrinth Tandem Mass Spectrometry of Lipids *Israel Keats Robert C Murphy*

suprsolvr has the opportunity to test a game set in a mechanical labyrinth by playing inside of it which she s thrilled about the guy she s partnered with not so much but as they soon face robotic bugs word puzzles and obstacles they realize that they must work together to reach the center of the labyrinth or risk being trapped in virtual reality forever

the emerging field of lipidomics has been made possible because of advances in mass spectrometry and in particular tandem mass spectrometry of lipid ions generated by electrospray ionization the ability to carry out basic biochemical studies of lipids using electrospray ionization is predicated upon understanding the behaviour of lipid derived ions following collision induced decomposition and mechanisms of product ion formation during the past 20 years a wealth of information has been generated about lipid molecules that are now analysed by mass spectrometry however there is no central source where one can obtain basic information about how these very diverse biomolecules behave following collisional activation this book brings together in one volume this information so that investigators considering using tandem mass spectrometry to structurally characterize lipids or to quantitate their occurrence in a biological matrix will have a convenient source to review mechanism of decomposition reactions related to the diversity of lipid structures a separate chapter is devoted to each of seven major lipid classes including fatty acids eicosanoids and bioactive lipid mediators fatty acyl esters and amides glycerol esters glycerophospholipids

sphingolipids and steroids mechanistic details are provided for understanding the pathways of formation of major product ions and ions used for structural characterization in most cases specific ancillary information has been critical to understand the pathways including isotope labeling and high resolution analysis of precursor and product ions for a few specific examples such data is missing and pathways are proposed as a means to initiate further mass spectral experiments to prove or disprove pathway hypotheses while this work largely centres on the lipid biochemistry of animal mammalian systems general principles can be taken from the specific examples and applied to lipid biochemistry found in plants fungi prokaryotes and archeal organisms
