psychophysical theory exists in two distinct forms one ascribes the explanation of
phenomena and empirical laws to sensory processes context effects arising through the
use of particular methods are an unwanted nuisance whose influence must be
eliminated so that one isolates the true sensory scale the other considers psychophysics

only in terms of cognitive variables such as the judgment strategies induced by instructions and response biases sensory factors play a minor role in cognitive approaches this work admits the validity of both forms of theory by arguing that the same empirical phenomena should be conceptualized in two alternative apparently contradictory ways this acceptance of opposites is necessary because some empirical phenomena are best explained in terms of sensory processes while others are best ascribed to central causes the complementarity theory stresses the mutually completing nature of two distinct models the first assigns importance to populations of sensory neurons acting in the aggregate and is formulated to deal with sensory effects the second assigns importance to judgment uncertainty and to the subject strategies induced by experimental procedures this model is formulated to explain context effects throughout the text the exposition is interlaced with mathematics graphs and computer simulations designed to reveal the complementary nature of psychophysical explanations

measurement judgment and decision making provides an excellent introduction to measurement which is one of the most basic issues of the science of psychology and the key to science written by leading researchers the book covers measurement psychophysical scaling multidimensional scaling stimulus categorization and behavioral decision making each chapter provides a useful handbook summary and unlocks the door for a scholar who desires entry to that field any psychologist who manipulates an independent variable that affects a psychological construct or who uses a numerical dependent variable to measure a psychological construct will want to study this book written by leading researchers in fields of measurement psychophysical scaling multidimensional scaling stimulus categorization and behavioral decision making provides basic definitions and summaries of theories presents summaries and citations to relevant literature contains new developments current controversies and open questions explains relationships among fields and historical links

this volume presents a series of studies that expand laws invariants and principles of psychophysics beyond its classical domain of sensation this book s goal is to demonstrate the extent of the domain of psychophysics ranging from sensory processes through sensory memory and short term memory issues to the interaction between sensation and action the dynamics and timing of human performance are a further important issue within this extended framework of psychophysics given the similarity of the various cortical areas in terms of their neuroanatomical structure it is an important question whether this similarity is paralleled by a similarity of processes these issues are addressed by the contributions in the present volume using state of the art research methods in behavioral research psychophysiology and mathematical modeling the book is divided into four sections part i presents contributions concerning the classical domain of psychophysical judgment the next two parts are concerned with elementary

and higher order processes and the concluding section deals with psychophysical models the sections are introduced by guest editorials contributed by independent authors these editorials present the authors personal view on the respective section providing an integrated account of the various contributions or highlighting their focus of interest among them while also voicing their own and sometimes different point of view they contribute to the process of discussion that makes science so exciting this volume should be of great interest to advanced students in neuroscience cognitive science psychology neuropsychology and related areas who seek to evaluate the range and power of psychological work today established scientists in those fields will also appreciate the variety of issues addressed within the same methodological framework and their multiple interconnections and stimulating cross talk

the critique of the quantum power of judgement analyzes the a priori principles which underlie the empirical knowledge provided by quantum theory in contrast to other transcendental approaches to quantum physics none of the transcendental principles established by kant is modified in order to cope with the new epistemological situation that arises with the assumption of the quantum postulate rather by considering bohr s views it is argued that classical concepts provide the mathematical formalism of quantum theory with physical reference through symbolic analogies in the strict kantian sense the main result of the investigation is the determination of the highest principle under which quantum objects are subsumed this principle states that the conditions of the possibility of the systematic unity of contextual experience are at the same time the conditions of the possibility of quantum objects upon this principle rests the possibility of any a priori synthetic knowledge of quantum objects therefore the critique of the quantum power of judgement yields the prolegomena to any future quantum metaphysics

first published in 1986 this is part of the five edition of consensus and controversy collection with this volume focussing on lawrence kohlberg of harvard university the volume has been greatly enhanced by the recognition given to it by lawrence kohlberg who has written the concluding chapter for nearly thirty years lawrence kohlberg has amplified his cognitive developmental theory of moralization which has become prominent in the analysis of moral development and its consequent application to moral education

this book provides a comprehensive analysis of the copyright competition interaction issue in the eu and provides a sustainable method of approach the research identifies several approaches to the copyright competition issue some of which were extensively applied in practice while others were considered more theoretical however none of the discussed approaches has proved to be an adequate fundament to understanding the copyright competition interaction issue and there is still a considerable disagreement on

how to deal with this matter it is vital to start with the relationship between copyright law and competition law to overcome the flaws of the identified approaches the issue can be elegantly settled through the existent principles of both laws from the perspective of copyright law the application of competition law is a limitation of the author's right in a broader sense originating outside of copyright law from the perspective of competition law the presence of copyright should be comprehended as a specific situation in which the focus should mainly be on the effects of copyright instead of allocation and productiveness at the same time the concept of authorship should be taken into consideration in the light of consumer welfare only after the fundamental approach to the copyright competition interaction issue is settled is it possible to analyse specific situations further in practice several types of exercises have been recognised as the matter of the copyright competition interaction the research focuses on the interference between the exercise of copyright and competition rules on prohibited agreements i.e. licensing practices and abuse of dominant position i.e. refusal to license copyright each situation is analysed separately based on the common understanding of the copyright competition interaction issue and following the fundamental principles of copyright law and competition law in doing so a detailed critical analysis of the relevant case law and literature is provided after the analysis of the relevant case law and doctrine for both situations are conducted the research produces a specific approach and method of analysis specific for the copyright competition interaction cases dealing under article 101 and article 102 tfeu it should be noted that the approaches are primarily construed from the perspective of copyright civil law tradition and eu competition law although such approach might as well be considered in other legal systems and traditions in the end a special view is given to the digital industry sector and the assessment of further potential developments in that field that might potentially fall under the scope of the copyright competition interaction issue

document from the year 2019 in the subject law european and international law intellectual properties tufts university language english abstract the focus of this book is the analysis of male sexual crimes in international criminal justice the first part of the present research work is focused on the legal analysis of the relevant articles of international criminal court's statute regarding the obligation of cooperation between states for the punishment of serious crimes against humanity and war judicial development starting with the ad hoc tribunals and arriving at causes at various stages of proceedings still ongoing in the international criminal court icc opens doctrinal and comparative national debates especially in the case of lacking states cooperation seeking to elaborate specific topics such as the obligation of states cooperation requests for assistance during preliminary investigations during inquiries and confidential

information court assistance to states parties participating in the statute suspending the execution of a request the role of the prosecutor and the non assistance of some states impede the development and operation of international criminal justice the second part has attempted to analyze sexual crimes and especially the crime of male rape the jurisprudence of international criminal tribunals and the icc have tried to qualify rape either as a crime of genocide in the form of serious and physical injuries even if not necessarily permanent let b art 6 of the rome statute or as a crime against humanity where there are elements of context and above all material elements that emerge from the definitions given by the ad hoc tribunals and the elements of crimes or even as a war crime in case it is implemented to that of sexual violence according to a gender specific relationship to speciem judges through the jurisprudence have included in this context any conduct of a sexual type of aggression to human dignity that does not consist in an act of penetration and that does not involve physical contact the contrasts are always open due to the lack of dealing with a particular crime and difficult to prove it or testify before an international court the indication on the level of gravity of the crime is necessary for the relevance of sexual violence and rape as crimes against humanity that we will see in the coming years

despite the importance and amount of research activity devoted to assimilation and contrast processes by social psychologists there has been no volume that is devoted to this topic assimilation and contrast in social psychology consists of original essays on classic and contemporary developments concerning assimilation and contrast the editors have invited a set of leading researchers who represent a wide range of theory evidence and application of these phenomena the book will also include a chapter presenting a historical survey of relevant developments in psychophysics and social and cognitive psychology a closing chapter will provide a synthesis and suggest future directions this volume is suitable for professionals graduate students and advanced undergraduates

the largest work ever published in the social and behavioural sciences it contains 4000 signed articles 15 million words of text 90 000 bibliographic references and 150 biographical entries

all forecasting involves human judgment and many forecasts are based exclusively on judgment this book brings together the latest research into the role of judgment in forecasting it considers questions such as how good is human judgment do judgmental forecasters use information efficiently what techniques are available to help groups of people to produce better forecasts what reasoning processes are employed by people when they make judgments about uncertainty when should judgment be used in combination with statistical methods the role of judgment in strategic planning financial

forecasting and sales forecasting is considered from both theoretical and practical perspectives it will be of interest both to professional forecasters and academics and should stimulate further research into the processes involved in making judgmental forecasts and how these processes can be improved
