an attempt to free architecture from site and program constraints and to counter the profusion of ever bigger architecture books with ever smaller content some may call it the first manifesto of the twenty first century for it lays down a new way to think about architecture others may think of it as the last architectural treatise for it provides a discursive container for ideas that would otherwise be lost whatever genre it belongs to siteless is a new kind of architecture book that seems to have come out of nowhere its author a young french architect practicing in tokyo admits he didn't do this out of reverence toward architecture but rather out of a profound boredom with the discipline as a sort of compulsive reaction what would happen if architects liberated their minds from the constraints of site program and budget he asks the result is a book that is

saturated with forms and as free of words as any architecture book the mit press has ever published the 1001 building forms in siteless include structural parasites chain link towers ball bearing floors corrugated corners exponential balconies radial facades crawling frames forensic housing and other architectural ideas that may require construction techniques not yet developed and a relation to gravity not yet achieved siteless presents an open ended compendium of visual ideas for the architectural imagination to draw from the forms drawn freehand to avoid software specific shapes but from a constant viewing angle are presented twelve to a page with no scale order or end to the series after setting down 1001 forms in siteless conditions and embryonic stages blanciak takes one of the forms and performs a scale test showing what happens when one of these fantastic ideas is subjected to the actual constraints of a site in central tokyo the book ends by illustrating the potential of these shapes to morph into actual building proportions

the texts presented in proportion harmonies and identities phi intelligence creativity and fantasy were compiled with the intent to establish a multidisciplinary platform for the presentation interaction and dissemination of research the aim is also to foster the awareness and discussion on the topics of harmony and proportion with a focus on different visions relevant to architecture arts and humanities design engineering social and natural sciences and their importance and benefits for the sense of both individual and community identity the idea of modernity has been a significant motor for development since the western early modern age its theoretical and practical foundations have become the working tools of scientists philosophers and artists who seek strategies and policies to accelerate the development process in different contexts

take an expansive and provocative tour of architectural theory and practice exploring everything from basic concepts to speculative design and subversive interventions universal principles of architecture illustrates in 100 concepts the importance possibilities challenges and roles that architecture plays in shaping the world this radical and perhaps surprising survey is divided into five sections archetypes methods conditions relationships and imaginaries and each of the five sections in the book introduces in 20 principles architecture at different scales and stages of the design process through an inclusive and holistic approach the book refers to initial design ideas creative design approaches reflections on the effects of the built and destroyed environments and architectural desires and aspirations to transform the world and engage with the cosmos because architecture is the converging point where many fields of knowledge ideas forms approaches methods sensibilities and materials meet the book provides a flexible

and dynamic space where the material conceptual and social take shape written illustrated and designed by critically acclaimed architects educators and authors cruz garcia and nathalie frankowski of wai architecture think tank universal principles of architecture combines accessible writing with otherworldly images like the ones they have displayed in exhibitions at the centre pompidou metz museum of modern art new york neues museum nuremberg and museum of art architecture and technology lisbon the principles include figurative archetypes parasitic architecture diagramming modelling three dimensional printing carbon neutral biomimicry inclusive design participatory design ai cities queer cartographies intergalactic architecture intended as an intergenerational and transdisciplinary reference volume the book presents an ambitious overview of what architecture has been and can be in a world full of urgent challenges and abundant opportunities for social and ecological responsibility and design creativity this book will challenge your preconceived notions of what architecture is and how it can be used the titles in the rockport universal series offer comprehensive and authoritative information and edifying and inspiring visual examples on multidisciplinary subjects for designers architects engineers students and anyone who is interested in expanding and enriching their design knowledge

as a way to understand the contemporary project in architecture this book provides an index of ideas theories projects and definitions that string into a methodology for evaluating the contemporary language of architecture described as contemporism through a review of topology form and typology system and elements the contemporary project has been trying to answer the postmodern question of how to move beyond modernism through a thread of architectural styles that tried to respond to deficiencies from the modern promise and contextual changes yet the question remains should this ongoing struggle to move beyond modernism be a stylistic battle has the present architectural practice ever left the modernist tendencies and is there a structure for a contemporary language in architecture this book presents a collection of highly illustrated

projects that have worked under these parameters to break away from modernism in order to present a holistic integration of topology and typology as a language for contemporism the index is illustrated with individual spreads which can be read sequentially or independently and encourages the reader to make their own connections it also includes interviews and contributions from toyo ito anthony vidler ben van berkel christian kerez and greg lynn this book is essential reading for undergraduate and graduate students in architecture

the 1960s and 1970s avant garde has been likened to an architectural big bang such was the intensity of energy and ambition in which it exploded into the postwar world marked out by architectural projects that redefined the discipline it remains just as influential today references to the likes of archizoom peter eisenman john hejduk and superstudio abound highly diverse the avant garde cannot be defined as a single strand or tendency it was divergent geographically reaching from europe to north america and japan and in its political formal and cultural preoccupations it was unified though as a critical and experimental force critiquing contemporary society against the backdrop of extreme social and political upheaval the paris riots of may 1968 the anti vietnam war movement in america and the looming ecological crisis re imagining the avant garde outlines how in contemporary architectural practice avant garde projects retain their power as historical precedents as barometers of a particular design ethos as critiques of society and instigators of new formal techniques given the far reaching impact of the subsequent digital revolution which has since reshaped every aspect of practice the issue asks why this historical period continues to retain its undeniable grip on current architecture contributors pablo bronstein and sam jacob sarah deyoung stylianos giamarelos damjan jovanovic andrew kovacs perry kulper igor marjanovic william menking michael sorkin neil spiller and mimi zeiger featured architects archizoom andrea branzi jimenez lai luis miguel koldo lus arana klaus nemestudio superstudio and urbanlab

since the 1980s the diagram has become a preferred method for researching communicating theorising and making architectural designs ideas and projects thus the rise of the diagram as opposed to the model or the drawing is the one of the most significant new developments in the process of design in the late 20th and early 21st centuries diagrams of architecture is the first anthology to represent through texts and diagrams the histories theories and futures of architecture through the diagram spanning the pre historic to the parametric diagrams of architecture illustrates over 250 diagrams and brings together 26 previously published and newly commissioned essays from leading international academics architects theorists and professional experts these combine to define

the past and future of the diagram s discourse prefaced with a critical introduction by mark garcia each text investigates a central concept or dimension of the diagram ranging from socio cultural studies science philosophy technology cad cam computing and cyberspace and virtual digital design to methodology environment sustainability and phenomenological poetic and art architecture as well as interior urban engineering interactive and landscape design the first critical multidisciplinary book on the history theory and futures of the architectural diagram includes seminal articles on the diagram from the history and theory of architecture such as those by peter eisenman sanford kwinter mvrdiv neil spiller lars spuybroek un studio and anthony vidler features 14 newly commissioned articles by leading architects and theorists including charles jencks hanif kara patrik schumacher neil spiller leon van schaik and alejandro zaera polo and two new interviews with will alsop and bernard tschumi includes a full colour critical collection of over 250 of the most significant and original diagrams many of which are previously unpublished in the history of architecture from around the world

different contract procedures adopted on civil engineering projects are studied in this revised edition taking into account the new developments the new coverage includes comments on various related books and new forms of contract that have been published

the construction and building management journal
